Vivid™ Electrostatic Sprayer

Vivid™ ELECTROSTATIC Sprayer is lightweight and very comfortable, powered by a lithium battery that allows you to carry out hygienization for several hours, freely and anywhere, without being tied down by a cable. The solution is sprayed in very small and light drops, which reach every point of the area to be treated and settle effectively. Through the electrostatic charge the drops are attracted by the targeted surface and while laying down, they create a sanitizing coating.

Why do you need Vivid™ Electrostatic

Germs and bacteria are very quick to spread and settle in tight corners and hidden spots. Disinfecting effectively by hand takes a very long time and requires prohibitive costs. In addition, there are many areas that are difficult to disinfect properly, such as computer keyboards and telephones in offices, or checkouts in supermarkets or shops.

An electrostatically charged spray can reach the entire targeted area evenly, right down to the most hidden points. The cloud of charged particles completely envelops the surface and sanitizes every part of it.

NEW
FOR
2021

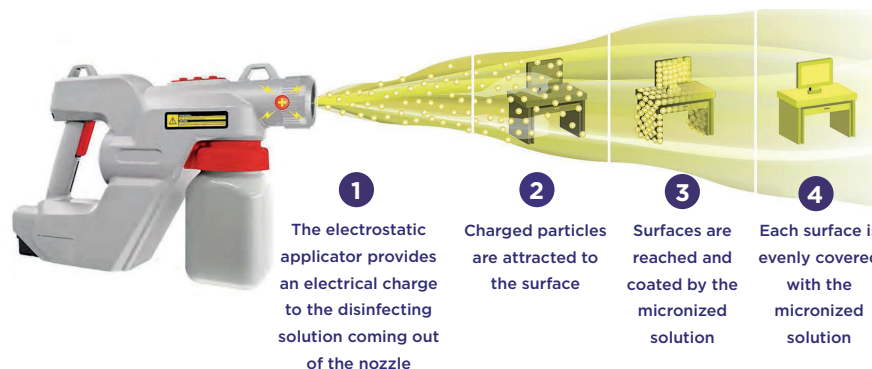

HOW DOES IT WORK?

Electromatic hygienization allows to coat a surface quickly and evenly with a sanitizing solution.

The electrostatic applicator provides an electrical charge to the solution coming out of the nozzle. The charged molecules repel each other, so they keep an even distance from each other but, at the same time, they

are attracted to the surface to be treated. The strength of the charged particles is greater than that of gravity, so they are immediately attracted by the surface and do not fall to the ground. The attraction therefore ensures that all the particles of the solution settle on the surface, thus creating a 360-degree coverage, without leaving out any areas.

Vivid™ 25 External Sanitiser / Disinfectant Kit

This self-contained mobile unit with the use of Vivid™ 5 or similar, can clean, rinse and sanitise all water washable surfaces in no time at all. It uses a rechargeable Lithium-Ion battery and a 12v pump to draw solution from the 25ltr storage tank and feed it through a 6m chemical hose to the applicator lance.

Trolley features & specifications:

- Specialist low volume Chemical Resistant Pump with Viton and Santoprene components.
- Precise Digital Controller used to adjust the speed of the pump and indicate battery level.
- Low profile flat-free tyres for rough terrain.
- Compact design, with collapsible handles for storing in confined spaces.
- A lightweight frame with handle mounted on the front plate for easy lifting and handling.
- Rechargeable Li-Ion battery with battery charger (12 hours constant run time / 5 hour charge time)
- Stainless Female Hoselock outlet connector with stop valve to save solution when disconnected.

Performance:

- Can cover up to 12m² per minute.
- One 25ltr fill can cover up to 180m² of surface
- 25ltr lasts on average 12-15 minutes

Trolley Includes

1 x 5ltr of Vivid™ 5
sanitiser with
every trolley.

Ideal for use on:

- Play areas and Children's parks
- Shop Fronts
- High traffic pedestrian areas e.g walk ways, external seating
- Shopping Trolleys
- Train Stations / Bus Stations / Bus Stops
- Car Parks

+ Many more suitable applications

The system also includes:

- 36" Trigger controlled application wand.
- 6mtr delivery hose with Chemical Resistant connections.
- Telescopic pole attachment for applying solution at heights up to 12mtr / 40ft (Telescopic pole is an optional extra – ask for further details)
- 5 litres of Vivid™ 5 which will make 50 litres of solution.
